An Investigation of the Effect of the Wadc 30,000-Horsepower Whirl Rig Upon the Static Characteristics of a Propeller

By -

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. Tests have been made at the Langley Aeronautical Laboratory on a 6000-horsepower propeller dynamometer installed at a ground test facility to determine the effect of a half-scale model of the Wright Aeronautical Development Center 30,000-horsepower whirl rig upon the aerodynamic characteristics of a three-blade NACA 10-(3)(062)-045 propeller. The model of the whirl rig was mounted in front of the 6000-horsepower propeller dynamometer. Static propeller tests were made for 0deg, 5deg, 10deg, 15deg, and 20deg blade angles over a range of rotational speeds from 600 to 2200 rpm in 100-rpm increments. Measurements were made of propeller thrust and torque, stresses in the propeller blades, and static and total pressures over the surface of the model. Propeller thrust and torque were increased up to 33 percent by the presence of the model of the whirl rig, but the average increase was from 5 to 10 percent. Blade vibratory stresses were small. This item ships from La Vergne, TN. Paperback.

Reviews

This publication will not be easy to get going on reading but really exciting to read through. it was written really perfectly and beneficial. I found out this pdf from my i and dad suggested this publication to find out.

-- Garrett Adams

Very beneficial to any or all class of individuals. It is really interesting through looking at time. You will not feel monotony at any time of your time (that's what catalogs are for concerning in the event you question me).

-- Dr. Dallas Reinger IV
